

David Falvo

It is time for us to permanently protect our water and our precious Delaware River. I urge you to permanently ban fracking and to prohibit the contamination of all water resources including our drinking water. A permanent and comprehensive ban on natural gas drilling, fracking, and all related activities throughout the River Watershed is the only way to insure that our water resources are completely protected. Water is life and this watershed is a part of our commonwealth and belongs to our grandchildren and their offspring. In terms of energy production, there are numerous proven alternatives that are sustainable and that have little or no impact on our water. Don't let those interested in short-term financial gains influence you to neglect your responsibilities to protect our watershed by imposing a permanent ban. Do the right thing.
