

Bill Suggs

I live on the Delaware River, I am in or on that water from April until October. My Grandchildren are swimming in it every summer. I have well water which is very good right now. I have no desire to change any of that. I fear that allowing Fracking in the Delaware River Watershed would threaten to destroy all that. The potential for accidental spillage, water table compromise or poisoning, along with probable environmental threats to the river's flora and fauna demands fracking be banned. Period. Thank you for the opportunity.
