I live in NJ and I OPPOSE the draft regulation. The Delaware River Basin is relatively clean now. We need regulations which will make it cleaner, not which would allow companies to pollute and degrade it with fracking waste, or to extract our precious clean water for their fracking operations. We've done the right thing in banning fracking itself throughout the Delaware River Basin. As we have already seen in our recent history, it takes decades to clean up a river basin once it becomes badly polluted. These draft regulations would inevitably lead to increased pollution in the Basin and the River itself. Please revise the regulations to BAN any fracking waste or extraction of our water resources for fracking operations. Thank you for reading my comment. Now, do the right thing.
