I will not support any 'ban' on natural gas or water withdrawal for HVHF, (fracking).

HVHF has been in use since the early 1980's with great success and no contamination with water supplies. Natural gas is the cleanest fossil fuel energy we have. We should do our best to supply as many usages as possible. Selling overseas, when other countries also produce it, will never hurt our needs.

Renewable energy, especially solar panels, are toxic to eliminate in less than 20 yrs when they become completely useless!

They may work well in sunny dry deserts but not worth even looking at here.

States in the Marcellus Shale reserve are using HVHF and safely supplying natural gas which is much cleaner than coal and oil, with the exception of NY, thanks to the probable criminal sitting in our governors chair.

Thankfully, our EPA ends the use of "Secret Science" in crafting regulations, which is exactly what DRBC has done. EPA Administrator Scott Pruitt will force the "party of science" to rely on actual science when pushing for regulatory changes.

As for the DRBC I think it's time to close that group, it has not proven to be worth having!
