this is a good start but does not ban using water from delaware to frack and then sendign it somewhere else. that should be banned too. the entire fracking process should be banned in this area. every single element of it should not be permitted in this most highly congested area where people live and where people need clean water. this is a dirty water project --fracking - and the people and birds and wildlife and nature that tries to stay alive in this area are already dealing with endless pollution and contamination. we certainly cannot allow more. we have endless hazardous sites here already damaging our water. noi way should any part of this pollution process be allowed in any way in any part of this area in nj, by the delaware river and by nearby environs. this comment is for the public record. we simply cannot allow people/nature life to be killed by this contaminatoin.
