

Gary Tucker

Hello, my name is Gary Tucker and I am expressing my concerns over the proposal to allow and /or continue fracking, drilling, mining and any other fossil fuel activities in and near the Delaware River. This continued use of destructive means of collecting outdated energy sources must stop now if the health of the geography of the Delaware River and all forms of life (include we humans) supported by it are to continue living healthy existences without the looming health epidemics that have increased along with the activities mentioned above. Our very existence is at stake, please start taking this seriously. Thank you for reading.
