studies. Geologists back in 2010 said to us the failure rate might be five to ten percent. Well, the science is bearing out. DEP has had over 4,000 incidents where the public has said there has been problems with their drinking water. There's been over 1,000 studies from the physicians for state energy, a health database. They have over 180 studies about the health impacts.

# HEARING OFFICER:

I have to stop you.

### MS. ZERBE:

So we need to stop

drilling and we do hope the Governors

will do the right thing. It is an

election year. We're watching and the

world is watching. End fracking now,

all of it.

#### HEARING OFFICER:

Ned Fink, please. And then it would be Lois Ann Oleska and then James Orben. Okay, Mr. Fink.

## MR. FINK:

Okay. My name is Ned

Fink. I'm from Coopersburg, PA and I'm

just a taxpayer. And I'm against

fracking, but I'm not going to thrash

over everything the people here said I

agree with. So there's no sense in me

talking about that, but what I do want

to talk about is, we're trying to clean

up the Delaware River and the Delaware

Bay.

And a lot of people don't know this, but all the municipalities in the drainage are going to have to clean up their storm sewers out.

They're going to have to put strainer bags in. Every time there's a rainstorm, they're going to have to clean their storm sewers out again, put more strainer bags in and the Borough are going to have to build a retention pond.

And that's going to cost over a half million dollars, and they're probably going to have to take some homes because they want it on the

south side of the borough. Now, all this will only reduce the sediment that goes into the bay by ten percent, but the taxpayers are going to have to pay for all this.

2.4

So at a time when we're trying to clean the bay up, then we're going to go along with all this fracking and --- and you can't have that type of chemicals and everything winding up in the Delaware River. Now, I know in the Susquehanna River --- Towanda, PA, their fracking byproducts wind up in the Susquehanna River. And the Susquehanna River is having a problem right now and the bass don't reproduce anymore.

They're all small and stunted and they just don't reproduce.

Now, I don't know if that's from fracking, but it --- it seems funny that's just happened recently in the last few years.

Now, Pennsylvania is a Commonwealth and if you look in the

96

1 encyclopedia, it tells us that a 2 Commonwealth is a government where we the people have something to say, but 3 4 it seems more and more in the 5 Commonwealth of Pennsylvania, nobody 6 heeds what we have to say. So I just 7 would like to thank you for the time. 8 HEARING OFFICER: 9 Okay. Thank you. Ms. 10 Oleska, Lois Ann Oleska, and then James 11 Orben and then Ned Heindel. All right. 12 And this is Lois Ann Oleska.

### MS. OLESKA:

Correct.

#### HEARING OFFICER:

All right. Yes, ma'am,

please.
