

## Xaver Kandler

I fully support a ban on fracking. However, the ban must be complete. A ban that still allows the processing of fracking water and the extraction of water from the Delaware River Basin for fracking in other areas is dangerously incomplete and contradictory. If the DRBC believes that there shouldn't be fracking in the Delaware River Basin, then they should prevent the effects of fracking on our Basin in addition to surrounding areas!

Please do what is right and what history will look back on as the unequivocally correct choice.
