

Steven J Ercole

At a time in our evolution when fossil fuel should be something you would have to google to know what it was (or in my time: look up in a dictionary), we are still feeding this addiction! By now,, there should be clean, reusable; solar, wind and water turbine energy, no carbon pollution, no famine, no illiteracy, no incurable disease, no war! Early in the 20th century, Nikola Tesla's experiments with free space magnetic electric energy was a very real and viable vision! The possibilities from his vision for positive, progressive, social application were endless!,, But like anything that is a threat to the status quo, it was not welcome! For his trouble,, he died a "mysterious death",,, and his work and research confiscated by the U.S. Govt.,, the FBI, I believe! To continue to ravage the earth for any element of fossil fuel energy,, while suppressing the development of alternative, environment friendly, sustainable energy,, is insanely greedy', and short sighted!

U.S. GOVERNORS:

**RESIST TRUMP'S
CLIMATE "PLAN"**
