

## Janet I Hill

My comments are in regard to your proposed so called "ban" on fracking in the Delaware river basin. Let me get it straight' You "ban", i.e don't want fracking in the basin, BUT it's OK to dump fracking waste water into the river basin, and take clear water from the basin to use for fracking elsewhere. WHAT!?! Didn't you notice that people all along the basin drink that water?? Of course, since the river is a living thing, lesser creatures like fish and animals use it, too. Apparently, you see both man and beast as expendable under this proposal.

As a nurse, I especially am angered that you would put the lives of people in jeopardy. We still don't know the extent or nature of the chemicals added to the water used for fracking. I have seen pictures of what happens to people who ingest it, or even wash with it. Horrible!

But you surely already know all of this. What keeps it from making a difference in your proposal??

There is ONLY ONE ANSWER: BAN ALL FRACKING AT OR NEAR THE DELAWARE RIVER BASIN, INCLUDING ANY AND ALL OPERATIONS PERTAINING TO THE SAME. In good conscience, you can make NO OTHER decision.
