

Carolyn A. Kidder

Please ban fracking and any and all actions that in anyway threaten the potability of water from the Delaware River. Water is becoming a scarce resource; we must do everything possible to prevent pollution, even to making extractive companies somewhat unhappy. Fracking is, in energy terms, a wolf in sheep's clothing. It seemed like a great way to get more energy cheaply. But then we realized that it used and permanently polluted fearsome quantities of water, that it gave out dangerous fumes that are 85% worse than CO2 for causing climate change, and there seems absolutely no good, safe way to dispose of the polluted water. Some industry members have tried to say that none of this is true, but that is a specimen of "alternate reality." The above is factual, and there are no alternative facts

Please ban fracking and all fracking waste in the crucial Delaware Basin.

Thank you.
