

Saskia Krafft

It is crucial for humans that are unarguably a part of nature to finally protect and live in better harmony again with the habitat we call our homes. Fracking is a harmful and disastrous process that will have heavy short-and long-term effects. Especially in this outstanding landscape the consequences of fracking would destroy a beautiful area that has a lot to offer on so many levels. We have to be a role model for future generations how we want to relate to nature and therefore ban this project immediately!
