

Victoria Oltarsh

This is a very beautiful part of nature in the United States. It is a crime to Frack or damage or not repair anything that has been done. Chesapeake Bay must be cleaned up and all the natural fish and wildlife be allowed to heal, sustain and come back to the balance. This is the most important thing to me of any political issue. preventing more climate change and reestablishing a the earth. It is the future of our children and grandchildren. How can you do anything less? Fracking damages waterways and earth's Infrastructure.
