

## Liz Taub

Please use your common sense to protect our environment from The detrimental effects of fracking. We can't justify using chemicals that last for thousands of years and destroy drinking water for the sake of profit!! Think of future generations who will inherit the problems you'll create if any part of the fracking process is permitted to go forward. I have a house in PA not far from the delaware Basin that I'd like my Kids and future generations to enjoy. Don't mess it up please!! Thank you.
