

## David Lutzker

The fracking going on in our state is a corporation robbing the residents of the state of their resources without paying for the full cost, and along the way destroying our environment. Fracking by injecting undisclosed chemicals which contaminate the earth, and without safe ways to dispose of those chemicals is irresponsible to us, and our children and grandchildren. The pipelines cannot be guaranteed not to leak. Guarantees that have been given have been broken. The creation of pipelines to transport this gas are also destroying our environment. There is no public interest being served, as so much of this gas goes for export, so our natural resources are being shipped to other countries! And we are left with the mess to clean up (or for our children to clean up). Not fair for them to take and destroy, and not pay for the damage they cause.
