

Mark Canright

To the Delaware River Basin Commission: I am writing to you to urge you to permanently and forever ban fracking from the entire Delaware River Watershed. Fracking must stop - it is harming our communities and our water and our children. It is time to stop all fracking, and fracking waste should also be banned. We are in 2018 - it is time to change our energy policy from destructive practices such as fracking for oil and gas - to current solutions already in existence. These solutions include energy efficiency, energy conservation, solar energy and wind energy. Please ban fracking and fracking waste for good. Thank you for your consideration of my comments.
