

Matthias Hess

The Delaware river, one of the last pristine rivers on earth, provides 5% of America's drinking water. It is a priceless resource, and I oppose any hydrofracking activity in or near its watershed. While the proposed regulations are a promising start, they do not fully protect communities from the impact of fracking because they allow for the exportation of water from the Basin to frack elsewhere AND the importation of wastewater for treatment into the Basin. This cannot be permitted.

Please ban all hydrofracking activity within the watershed, including use of its water for fracking activity anywhere and treatment of fracking wastewater here.
