

Mike Gibbons

Dear sirs, When taking up Special Regulations Part 440 Fracking, Please take the health and well being of residence of the surrounding area and future of the generations to come. Do we need this so badly as to risk the future? Why even take the risk to our drinking water and the assault on our environment. The Delaware river and watershed are just too valuable to resident and future generations to come. Please do the right thing and follow Governor Murphy's lead. Please protect this resource,we have already been setback by decades, by Trumps recent assault on the environmental, for a few dollars that might be earned. We need to be good stewards of our valuable assets here in the New Jersey and around the world for that matter. Let's be proud of and resist the onslaught to our environment. Sleep good at night and do what you know is right, God bless you,
Michael&Donna Gibbons
