

Michael Hoy

As one of many Pennsylvania residents who drink nature purified ground water in the Delaware Basin, my request is simple: abide the the state constitution and preserve the future citizens right to clean water and clean air.. We are surrounded by super fund sites that failed to meet the promise and anyone with nominal understanding of subsurface structures knows why. In your position of authority, with the constitution as your guide, ban the importation of fracking wastewater into our basin and the removal of the water from the basin.

We need all the water and it must remain as pure as possible to support all of the incredible quantity and diversity that exists.

Thank you for the work you do and for considering my comment
