

Bruce Wallace

I support a ban on fracking in the Delaware River basin.

I oppose the permanent withdrawal of water from the Delaware River watershed for fracking purposes.

I oppose the storage of contaminated fracking water in the Delaware River basin.

We depend entirely on our groundwater here in eastern PA. Fracking can cause major contamination of groundwater. At best, it results in the need to remove contaminated water from circulation. Both of these likely consequences are entirely opposed to the best interests of the residents of the Delaware River basin.
