

Michael Snyder

The Pennsylvania Constitution reads: "The people have a right to clean air, pure water, and to the preservation of the environment." Fracking is unsafe. Proven time and time again by the hundreds of individual wells that have been contaminated by the process. In this day and age of technology it is baffling that this fracking process is used and considered safe. The fact that the EPA does not require the disclosure of what chemicals are being utilized and released in the fracking process is totally unacceptable... once the water and land is made Toxic it's over.... we need to follow New York and Vermont and ban fracking in Pennsylvania all together. We owe it to our future generations of children as well as to Mother Nature... "Let's get this one right"...
