

Roberta Steinman

I support of a COMPLETE fracking ban. Do NOT ALLOW any toxic or radioactive wastewater produced by fracking to be stored, processed, and discharged in the Delaware River Watershed and DO NOT allow water to be exported from the Basin to fuel fracking elsewhere.

The Delaware River was designated as a national Wild and Scenic River by Congress because of its outstanding features, irreplaceable resources, exceptional water quality and scenic and recreational value. These prized assets provide important economic benefit to all four states whose tributaries flow to the Delaware River. These values are gravely jeopardized by fracking and its polluting operations and must be protected for the public and future generations.

Substantial evidence shows that fracking has substantial adverse effects on public health, property interests, agriculture, and on our air, water, and land.

EPA's most recently released fracking study provides scientific evidence that fracking activities can impact drinking water resources and includes water impacts from shale gas in the Pennsylvania community of Dimock. Fracking pollutes groundwater, destroying the quality of aquifers for generations to come.

I support moving to 100% Clean Renewable Energy - for our Health, our ecosystems, our Planet.
