

Henrietta Stern

Because I live in New York City and because our city relies on clean water sources from upstate and the Delaware River Basin, I want to see a permanent ban on fracking and any possibility of water withdrawals as well as wastewater processing, storage and disposal from the DRB even if for use in fracking activities occurring outside of the Basin. Regulations covering these contingencies must be stated clearly in the regulations so as to avoid any loopholes. Thank you for your attention to this issue.
