

JoAnn Williams

Ban all fracking water from the DRB. Any treatment can't remove radioactive material from it. This affects people's health and would have continued effects on future generations. The option of having clean drinking water for millions of people is becoming less as creeks and rivers continue to flow to the DRB. They are already contaminated from bentonite used in putting in pipelines. Our earth is in a losing battle against Big Oil and Gas as more contamination occurs. This is a fight for life.
