

Kelley Nelson

I support a full ban of fracking in the Delaware River Basin AND a full ban of the disposal of any fracking wastes including 'produced water'. These waste products are laden with chemicals, which the drilling companies are allowed to keep secret. The wastes also contain naturally occurring radioactive materials. NONE of this is safe for disposal in our Delaware river watershed. My family and I are avid paddlers and greatly value the un-dammed Delaware river. We love our river. I am also opposed to the disposal of waste in injection wells. It has been proven that the wells can cause earthquakes, in addition to the threats of possible spillage or leakage of the toxic and radioactive wastes.
