The Delaware River is a magnificent part of our national heritage, and one of the last pristine rivers on earth. It also provides drinking water for me and my family. That's about as personal as it gets. So I take everything having to do with the Delaware River Basin very seriously. I applaud your proposed fracking ban but I also believe that the regulations should be tightened, getting rid of loopholes that allow for the exportation of fracking wastewater from the Basin to fracking elsewhere AND the importation of wastewater for treatment into the Basin.

I want fracking banned in its entirety! Especially when it's so intimately connected to the water my family drinks every day.

Thank you.
