

Bridget Shields

Since unconventional fracking has been practiced there have been major, negative impacts on water, air and the health of people and animals . This industry has been put into action without the minimal safeguards required by any other business and the impacts have been devastating. We need to stop promoting this toxic industrial practice and promote more sensible, sustainable energy for the future generations that will follow. Water is the one resource we can't live without and we need to protect it at every cost. Banning fracking will force us to renewable energy solutions that promise a healthy future.
