

## Allan Post

There is no way on earth fracked water should be imported anywhere. Certainly not into the Delaware River Basin where citizens have expressed such an unequivocal desire NOT to have it. They are not friends of fracking there, and indeed they and I are not friends of fracking anywhere. There are 596 proprietary chemicals that are contained in wastewater. There is no known technology to clean or remove them. Thus, you are contemplating sending highly toxic water to people to consume. This is an act of murder. See some documentaries if you are in ignorance about this. People exposed to contaminated frack water get very very very sick, in horrible ways. If you permit this, there will be a torrent of lawsuits that bankrupts your agencies hampers your ability to get anything done, and reduces the public's faith in you to zero. Do you really want such guilt and so many problems, on your conscience? Of course not. Do the right thing and protect the people of the Delaware River Basin. I write as a former resident of the state and someone whose grandfather grew up in Pennsylvania. Thanks for hearing my comments.
