

Linda Brill

We strongly oppose hydraulic fracking and ask that you PLEASE consider the long term health of our citizens and prohibit fracking as well as all related water use in the Delaware River watershed. We have seen the disaster that fracking has created for other watersheds and ask that permission be denied for this industry to use unlimited amounts of our currently safe water as well as deny the disposal of toxic chemicals back into the watershed. We all have to consider that we can find other ways of creating energy but it's far, far harder to reclaim a precious resource like clean water.
