

## David Loeb

Dear Commissioners, I urge you to build upon the decision of the Commission not to allow the practice of hydraulic fracturing in the Delaware Basin by also banning by regulation the disposal of waste water from hydraulic fracturing operations in the Delaware River Basin as well as the export of water from the Delaware River Basin to be used in hydraulic fracturing. The economic benefits of inexpensive natural gas cannot be allowed to outweigh the risk of pollution to the Delaware Basin. This is the drinking water of 16 million people! Thank you, David Loeb
