

## Eva-Maria Swidler

Please ban fracking and all its subsidiary activities (using water from the Delaware for fracking, treating fracking wastewater in the Basin, etc.) from the Delaware Basin!!

It's time for people and their representatives to stand up to the fossil fuel industries and say that our health, and the survival of our dear planet, are not negotiable. Fracking is an assault on nature and on human health, and adds yet one more piece of climate change by bringing yet more carbon out of its long term storage underground and adding it to the atmosphere.

If you care about your children, your grandchildren, or the life of all beings on earth, stop this madness.
