

retired Health Inspector for New Jersey REHS

To the Honorable members of the DRBC, I agree on the ban on fracking but oppose to the wastewater disposal and the intake water from anywhere in the DRB. I am aware a lot of folks testified that they have a "Constitutional RIGHT" to do what they want on their own property. The concern is what about the "RIGHTS" of the folks/neighbors including children, parents and grandparents that have had their properties seized by eminent domain for the pipeline installation and alterations because of fracking and the infrastructure. Also, a concern is if my neighbor has the "Constitutional RIGHT" to Frack his property, the neighbors therefore have no RIGHT for clean air, land and water as this procedure interferes with the health of the general public as the fracking is horizontal underground under their property when they did not sign on the lease. The concern for the water withdrawal will also allow the numerous diesel trucks with odors to be transporting equipment/ water to and from the fracked site which is being fracked outside of the basin. Please do not allow this fracking to occur and do not allow us to receive the polluted water or allow water withdrawals from the basin. Thank you
