

# Judy Paulus

Why did NY state ban fracking??because they have proof of health problems and are smarter than Pa!!!!

Air impacts—respiratory problems

Climate change impacts ——due to methane and other volatile organic chemicals released in the atmosphere

Drinking water impacts——from underground migration of methane and /or fracking fluid chemicals associated with faulty well construction or seismic activity

Surface spills——potentially resulting in soil, groundwater and surface water contamination

Surface water contamination——resulting in inadequate wastewater treatment

Earthquakes and creation of fissures ——induced during the hydraulic fracking stage

Community impacts——such as increased vehicle traffic, road damage,noise,odor complaints and increased local demand for housing and medical care
