

David Saperstein

There is no doubt that the fracking process poses an unacceptable danger to the environment. Pollution, carcinogens, earthquakes, fish kills, animal kills, groundwater contamination... A long list. And in the Delaware system, drinking water. Simply put, are you commissioners ready to be recorded in history as - "THE IGNORANT, ARROGANT, GREEDY PEOPLE WHO APPROVED POISONING THE WELL OF 15 MILLION OF THEIR FELLOW AMERICAN CITIZENS?!" I suggest your keep energy production above ground and non-carbon - wind, sun, tides and most of all RENEWABLE!
