

Richard Weiss

I want to register my support for the Delaware River Basin Commission's regulations that prohibit fracking near this valuable fresh water resource. I also hope that that the Commission and other government regulatory agencies will prohibit the withdrawal of water from our rivers for the purpose of fracking elsewhere in the state. I am an angler and want to protect our fresh water fisheries but I also think that fresh, clean water is a national priority. There is a growing shortage of clean water as our aquifers are being used to supplement our surface water. Thank you for your work to protect our supply of clean water.
