

## Lynne & Todd Waymon

We want a complete and permanent ban on natural gas drilling and fracking, as well as all related activities. It's bad for our water, bad for air, and there are other kinds of energy we should capitalize on to save ourselves, animal life and our environment. New York and Maryland have paved the way. The PADEP found there are 301 cases of private water well contamination - why would we want to created more?? Fracking pollutes groundwater and destroys the quality of acquifers for GENERATIONS TO COME! The methane is a greenhouse gas that is 86 times more "efficient" at warming the atmosphere than carbon is over a 20 year time frame. And finally, we don't have fracking uses enormous volumes of water (5-10 million gallons per well) and we don't have it! Thank you, Lynne & Todd Waymon
