

Susan Flyer

My husband and I live near the Delaware River and rely exclusively on our well for water. I am against fracking for many reasons, such as: depletion of the water supply, dangerous substances in waste water which would negatively affect our health, trucks and equipment which would create noise and pollution and, in the overall, be a threat to us and others who live here.

We chose to live here because of the peace and beauty of the countryside, as well as the fresh air and clean water. The disruptions and negative consequences would seriously harm not only our health and enjoyment of our home, but the value of our home and property.

Fracking has proven to be harmful to people, the environment, and property value wherever it has been used. Fracking also has a record of causing earthquakes, another threat to our lives and homes.

Please look into all of the very serious consequences of fracking and don't destroy our homes, properties, towns, health, and future.
