

## Ellen Lebowitz

A FULL , Complete, Permanent BAN on natural gas drilling and fracking and ALL activities associated with this - particularly including wastewater processing and discharges from drilling and fracking operations, as well as water withdrawals to be used for these operations elsewhere- is needed throughout the Delaware River Watershed. A complete and total ban is the only way to prevent serious pollution that can impact our precious watershed and the 15-17 million people who depend on this watershed for their drinking water.

It is utterly ludicrous to ban fracking and yet allow its toxic waste to be dumped in the watershed. And it is simply wrong to suck out our precious fresh water, depleting this vital resource here, so that it can be used for fracking elsewhere.

Please do the right thing here.

Respectfully Submitted,

Ellen Lebowitz
