

## Bonita Hay

Clean water is a right of all residents of the commonwealth of PA. Here in SE PA we depend on our surface waters for our drinking water. In fact 15 million plus folks living in the Delaware River basin depend on waters within this watershed area for life itself. That these precious resources should be jeopardized by hydrolic fracturing which serves the corporate interest more directly than it does the interest of people living in this area. Recent studies have shown not only toxic pollutants of various kinds but very high radioactivity in fracking waste. Accidents and leaks do happen and we can't afford to let this happen in the Delaware basin. Please ban hydraulic fracturing and protect the public resource from degradation.
