

Jay Podle

As a concerned citizen, I would like to advocate for complete banning of fracking and all fracking related activities in the Delaware river basin. Fracking is widely responsible for poisoning both land and water. The damage is often irreversible. Water is vastly more important to current and future generations than any form of out dated fossil fuel extraction or processing. Please stand with us in protecting the lives of the next generations from the for profit fracking industry. Please ban all fracking and fracking related activities in the Delaware river basin including the shipping of water out for fracking use, or the shipping in of fracking waste for processing.

Thank you,

Jay Podle
