

Jan Fisher

Please be a responsible steward of our pristine Delaware River. Do not allow hydrofracking. Without healthy water nothing can live in good health: animals, fish, birds. Why would we poison a body of water thereby poisoning everything that drinks and bathes in it?

Hydrofracking leaks toxic chemicals that pollute the water and surrounding soil and disrupt tectonic plates to such degree that earthquakes are caused.

Hydrofracking is also irresponsible as it's product is fossil fuel, a cause of climate change. Please do not frack. Please do not kill living species and water. Please make the moral decision. You know in your heart the moral choice is the best choice.
