

Nanci Sarcinello

I oppose any proposed rules that would allow fracking in the Delaware River Basin. Fracking will adversely impact water availability, economic development, the ability to control and abate water pollution, the ability to conserve and protect drinking water supplies, the ability to conserve and protect aquatic life, the ability to conserve and protect water quality in Special Protection Waters, and the ability to protect, maintain, and improve water quantity and quality basinwide.

I am opposed to HVHF in any form. If HVHF is permitted, I am opposed to the use of base fluids other than water. The use of base fluids other than water for HVHF is not practical within the Basin. All fracking in the Basin should be banned, and certainly any fracking that uses base fluids other than water should be banned.

Fracking will adversely impact the conservation, utilization, development, management, and control of the water and related resources of the Delaware River Basin, and should be banned.

Thank you.
