

Karen BATT

I am writing to voice my views on the Delaware River and fracking. I am totally against fracking, and am also against waste exports and wastewater disposal in our drinking water!

Our Delaware River provides drinking water to millions of people and holds about 5 % of America's drinking water and it needs to be fully protected. With climate change water supplies are dwindling in many places in America from severe drought and the use of deep aquifer water to irrigate farmland.

Please do not allow any of these harmful practices anywhere near our precious Delaware River!
Thank you.
