

## Jason Hinkle

It is necessary to stop all high volume hydraulic fracking and related components involved in the process, including waste water. It pollutes water, both in streams and in the ground. We can live without gas, but we can not live without clean water. Stop this madness and enact a full ban on fracking now! All inhabitants of the Delaware River Basin whom I have spoken with and who are fully knowledgeable of the danger of fracking and how it would destroy communities and sicken populations want it stopped. Do the right thing and don't repeat the destructive history of the fossil fuel industry in the 1900's. Ban all fracking in Pennsylvania.
