

## Lance Kounitz

The Delaware River Watershed as I have read is the source of drinking water for some 14 million people plus or minus. If we were to allow this fracturing to go forward and it proves itself a source of groundwater and surface water pollution there is currently no way to reverse the process. I am against it as it has caused unsolvable problems to groundwater in other areas of the country plus I believe we need to find ways to reduce our need for fossil fuels as quickly as possible. Please vote against this hydraulic fracking in the Delaware River Watershed forever. We can't take a chance on getting this wrong...leave the Delaware River free of fracking. Generations yet to be born will thank you.
