

Carl Wohlers

Dear Commission,

I write to oppose the Commission's proposal that effectively bans natural gas development in the Delaware River Basin region.

In my view, a successful society requires three core capabilities ... unlimited compute power (Moore's law and the emergence of highly parallel computing and ultimately quantum computing assures this), unlimited communications bandwidth (i.e. 5G) and finally the world's lowest cost energy to power this wonderful technology and the outcomes from it.

I'm all about being a good custodian of our environment. But, I'm also all about a sound economic future for my children and grandchild, and those of other's in the USA. Plentiful and "lowest" cost energy is a real advantage and we should take advantage of it.

Sincerely,
Carl Wohlers
