

David Fiedler

I get my drinking water from the Delaware watershed. I don't want to see waste water from fracking sites coming down river and getting in my water. Plus it's not good for all the fish wildlife and birds that depend on the watershed for their sustenance and survival. It's just a bad deal all around engineered so a few companies can make a bunch of money. Then the rest of us are forced to live with the consequences of their largesse. No way! (That is supposed to read fracking, not frocking, but I couldn't fix it.)
