We live in a beautiful state and have been given many lovely natural gifts to feel grateful about. Hydraulic Fracturing is not natural - it's destructive and ruins our clean water and heaven only knows what else we are destroying. We need to follow New York's lead - don't allow the greed to poison and ruin our lovely state forever. It hurts people, wildlife, land. It's taking us backwards - we need to be more imaginative and less short-sighted as far as finding new sources for CLEAN energy. That's the way to the future. Come on, stop the greed and selfish short-term thinking - a sad shame for everyone else now and in the future.
