

Kristine Burton

Our government officials in PA (where I live!) must send a strong message to all of America's government body that NOW is the time to put people and planet before profit once and for all. Our health, our natural resources, and our children demand this of you. We must be a leader in moving our country towards green and renewable energies that provide the energy we need while not destroying our water, land, and air. It's common sense. Have some common sense and BAN all fracking in PA once and for all!!
