

Allison Henley

Can you like, please ban fracking already? There are many reasons why fracking should be banned, and they have been ignored. Fracking causes greenhouse gases to be released into our environment. Gases such as methane are emitted into our atmosphere, and can be very detrimental. Like who even wants that? Do you? Also, fracking contaminates our waters, and frankly, that's kind of disgusting. I don't want to drink dirty water, and I bet you don't either. So, I think you should definitely ban fracking, just because of its negative effects.
